

## Discover the KIO320

The KIO320 is a rugged, modular, large screen kiosk that has been designed to ensure reliable operation in most industrial and public environments. Its modular components offer exceptional flexibility in customising the KIO320 to your unique requirements, whilst retaining the dependable core that has been field tested in mine sites, factory floors, public transport and other situations requiring robust protection against the hazards of an industrial environment. The 32" touch screen in landscape format offers plenty of screen area for most applications, and with customised signwriting offers a strong branding opportunity that will be noticed from a distance. The slimline design with a 27cm depth means that it can be installed in busy areas without impeding the thoroughfare.
